

## **KC SmartPort Selects eShipping as TDE Technology Partner**

KC SmartPort and its partners at the Mid-America Regional Council, KDOT and MoDOT are excited to announce the selection of eShipping as the TDE Phase III technology partner.

eShipping, headquartered in Parkville, MO, is a leading technology and logistics company. Its comprehensive Transportation Management System (TMS) brings to the TDE project a suite of solutions, including shipment optimization and execution, automated shipment tracking, historical shipment analysis and reporting, bill payment and invoicing, and seamless cross-platform integration.

“The TDE Board and our public sector partners are extremely excited about the selection of e Shipping. The membership base of the TDE will benefit from the entrepreneurial nature of the eShipping team,” said Chris Gutierrez, President of KC SmartPort and Executive Director of the Trade Data Exchange.

Its selection by the TDE team is a strong step forward for the TDE and its technology solution offering to supply chain companies on a global scale. The final solution will be a comprehensive shipping system to drive costs and inefficiencies from supply chains. “We could not be more excited about this partnership and the opportunity to develop a system that builds upon the strengths of all parties involved and provides a solution that creates cost savings and intangible benefits to companies of all sizes,” said Chad Earwood, President and CEO of eShipping.
